

MobileScape™

MobileScape™ is the first of its kind, wireless payment processing system for industries requiring sales or service payments away from an office. It integrates all business and financial aspects of payment processing in today's nonstop mobile environment for a winning, competitive edge. It saves time. It cuts costs.

Finally, a 24x7 solution that brings greater accountability, while automating time-consuming field transactions and control of the inherent risks...seamlessly... and at a cost every contractor can afford.

Linking hardware, software, wireless airtime and payment processing with real-time Internet reporting - all at an affordable flat-rate fee, **MobileScape™** is the best strategic move mobile businesses can make in the new Millennium.

Can you afford "business as usual"?

It is estimated that 5 to 10 percent of annual revenue is needlessly lost by the direct and indirect cost inefficiencies of field payment processes.

Field and back-office time lost requesting card authorizations, the margin of error at each end and the never ending "paper-chase" costs much more than most companies realize. It can be avoided.

With the **MobileScape™** System, a department with 10 field technicians could see an annual earnings increase of \$100,000.

Please refer to the Annual Cost Savings chart on back page.

the mobilescape™ difference...

Keeps it Simple

- This single handheld System links every needed resource.
- It prints receipts, stores and transmits data, conducts fraud checks and credit authorizations.
- Applications are user friendly.
- No end of month surprises or hidden fees.

Saves Money

- It saves valuable field time, allowing more billable sales or service calls.
- It saves back-office time spent handling authorizations and paper receipts.
- Real-time electronic processing minimizes receivables float.
- On-line reporting cuts administrative costs and time spent manually reconciling payment records.
- Card-present transaction with receipt and signature capture reduces charge-back costs.

Makes it Easy

- It's technology developed for "hit the ground running" ease with no learning curve.
- Wireless modem options include CDPD, CDMA, GSM and next generation high-speed 3G technologies.
- It offers 24x7 support with millions of links through Electronic Data Systems Corporation (EDS), one of the largest computer networks in the world.

Stays Connected

- State-of-the-art cellular networks ensure the highest signal availability and "store and forward" capability saves data where coverage is unavailable.
- Automated charge-back management and soon to come specialized capabilities make every payment a more secure transaction.
- Users can view or download records from a secure website for printing, backup archiving, or reconciling to popular accounting software formats, by truck, department or branch, end of a day, week, month or year.
